

<https://www.salesforce.com>

I like this website because of its logos and color combination. It also shows different tools with specific logo which relates the feature of the specific tool.

It also shows all feature with description and logos. With these logos we can easily identify the purpose of the specific feature.

This site also contains live agent for the help. buttons and link for the more detail of specific tool and feature.

Back ground color matches with the branding of the site and it also reflects the purpose of the site.

Three font types are use in this site and Everything is easy to read. There is different size for heading and description.

Main element of this site is the background image and the quote which shows company's success and it shows the successful business running via cloud technology.

Navigations on the top, Tools in the middle and purpose just below the navigations which makes site more attractive.

<https://www.bespoketraining.com/>

I like this website because of the color combination green and black. It also shows current top running courses and places where these courses will be organized. It also has map of the room for different training courses.

The main feature of the site is its course finder where we can easily find any course. User interface is responsive, so this site can easily access through any devices.

On the top of the home page it shows trending courses. It also shows that company is certified AWS authorized partner.

Combination of background color, image and font is very attractive. This combination makes site more attractive and user friendly.

<http://www.resonantcloudsolutions.com/>

This site is simple, responsive and user friendly. Each content is separate and easily accessible.

This site has navigation to different pages which includes different products, locations and blog where user can easily find important notes and ideas for specific need.

Logos are very attractive. Each logo describes specific service provided by company.

Content is easily visible because of font and back ground color.

<http://www.gseb.org/>

This site is for students of Gujarat who are in high school, but this site does not have any background color. Content and hyper link is not user friendly.

There is a different font style for same types of content and background color of button is also different, which should be same.

Content is hardly visible in first sight. Students could not find important information like result easily. They have to search a lot to find a single information.

There is no different section for particular information and logos and images are very less. It should be more to find any information easily.

<http://art.yale.edu>

Completely unmanaged website. There is no background color, logo and related fonts.

Content is separate, but the background image makes it hardly visible.

It is college site but does not look like a college site. There are so many images but very badly managed.

There is no button and logo which makes this site less user friendly and user cannot find any information easily.

<http://www.mtnldelhi.in/>

The content of this site is badly sorted. Background color, images and logos are also not matched with the content of this site.

Less content, unmanaged font and a less logos make this website less user friendly.

This site is also not responsive. So, this site cannot work in mobile Properly. I have checked by inspecting the site. It will work in mobile, but the content will be badly aligned in the mobile view.

The logo of the company is not visible properly. The content and buttons are not properly aligned, and color is different for the same type of buttons.
